

Basic HACCP Training for Meat, Poultry, Catfish and Other Food Processors

To help Meat, Poultry, and Catfish Processors comply with USDA's "Pathogen Reduction and Hazard Analysis Critical Control Point (HACCP)" regulations, MSU's Department of Food Science, Nutrition, and Health Promotion is offering a basic HACCP training course.

This basic course is designed for individuals who must have successfully completed a course of instruction in the application of the seven HACCP principles in order to meet USDA requirements. This course includes development of a HACCP plan and record review for a specific product. Individuals who attend and participate in the course will receive a certificate of course completion. Course instructors are certified by the International HACCP Alliance and will follow the standardized training outline for the course. The regulation states that certain functions be conducted by a HACCP trained individual, however, this individual does not have to be an employee of your establishment. The individual could be a consultant you employ to carry out these functions.

While this course is designed to meet the needs of meat, poultry and catfish processors, the basic principles of this workshop are beneficial to all food processors.

Discrimination based upon race, color, religion, sex, national origin, age, disability, or veteran's status is a violation of federal and state law and MSU policy and will not be tolerated. Discrimination based upon sexual orientation or group affiliation is a violation of MSU policy and will not be tolerated.
